Volvo Reman Parts

TURBOCHARGERS

Restore your Power

**To maximize truck performance,
stay Genuine**

Don't risk increased fuel bills and unplanned downtime. Trust the quality that Volvo Reman provides. Volvo Reman ensures that all turbochargers are remanufactured back to OEM or better standards by utilizing the most recent technology upgrades designed by Volvo engineers.

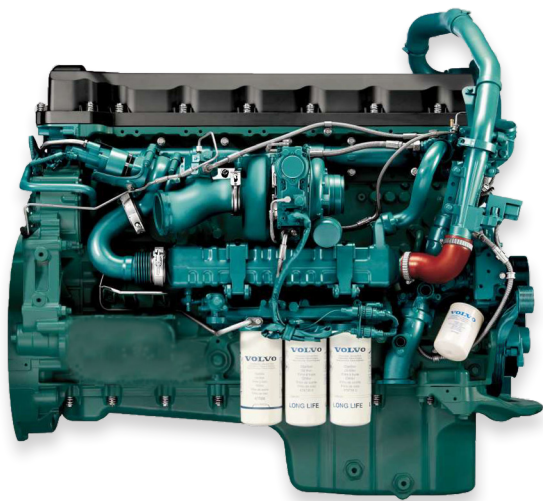

The Volvo Reman Process

The Volvo Reman turbocharger is tested throughout the entire remanufacturing process and is guaranteed to reach the performance requirements specified by Volvo.

Volvo Reman Quality

Restoring power and performance to your Volvo Truck

Non-Genuine Turbo Risks

- Damage to engine components such as aftertreatment systems, valves, pistons, etc.
- Increased fuel consumption
- Failure to meet emission standards
- High external oil leakage that could cause a fire
- Voiding Volvo's warranty

No Competition

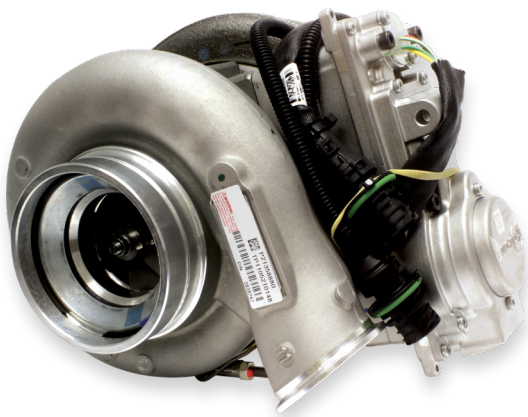

Remanufacturing failure is most commonly due to errors in the process, which is why a quality process is Volvo Reman's priority focus. Don't gamble with your investment. Always choose a Volvo Reman turbocharger. Use of a non-Genuine turbocharger jeopardizes the functionality of the truck and can result in large, unnecessary expenses.

The Bottom Line

The use of non-Genuine turbochargers in your Volvo truck simply risks more downtime. Choosing Volvo Reman quality will provide maximum uptime and engine performance.

Did you know?

Containment tests executed on third party turbochargers have not been able to meet all of Volvo's safety and quality standards.

Features	Benefits
Remanufactured and optimized for fit, form and function of Volvo trucks	Lower failure rates than non-Genuine Provides the longest life possible
Tested and validated against Volvo's stringent requirements for performance and emissions	Proven to provide the best performance Ensures EPA compliance Optimize engine performance
Precise tolerances on the bearing-system both radially and axially	Maximizes bearing life and proper oil pressure, which reduces vibrations and minimizes the risks for oil leaks
Correct tolerances and profile between the turbine / compressor blades and its housing	Optimized efficiency and lowest possible fuel consumption level Maximize the life of the turbocharger
All kits are sold with actuator and installation hardware	Simplifies ordering process Actuator and all installation parts are delivered with turbocharger

Volvo's standard warranty: 1 year / unlimited miles and includes labor when installed by a Volvo authorized dealer. Warranty terms apply.
